## Analog Block I/O Module

## Cat. No. 1791-N4C2

## Installation

Mount the block I/O module in a vertical (recommended) or horizontal position. Allow sufficient room around the block for cooling air flow through the block module. Refer to Figure 1.

Figure 1
Mounting Dimensions for the Analog Block I/O Module Cat. No. 1791-N4C2

CAUTION: When tightening grounding stud nut, do not exceed 15 in-lbs.

## Figure 2

Mounting on a DIN Rail

Block

1. Hook top of slot over DIN rail.
2. While pressing block against rail, pull down on locking lever.
3. When block is flush against rail, push up on locking lever to secure block to rail.

Figure 3
Inserting Labels

Labels for the front door and terminal strip are supplied with your module.

1. Remove die-cut labels from package.
2. Remove plastic cover on terminal strip by flexing in middle. Slip terminal designation label into built-in holders in terminal strip cover. Flex cover to install.
3. Open clear front door. Insert module designation label into slots that secure it to the door.

Connect wiring as shown in Figure 4, Figure 5 or Figure 6.

Figure 4
Wiring Connections for the Analog Block Module with Voltage Input (refer to Table A)

Analog signals must be within the +10 V common mode voltage range which is referenced to the analog system common (GND). If an input channel floats outside of this range, invalid input readings will result.

Figure 5
Wiring Connections for the Analog Block Module with Current Input and Customer-Supplied Loop Power (refer to Table A)

ATIENTION: The 249 ohm input current shunt is rated at 0.25 Watts. Do not exceed this rating.

Figure 6
Wiring Connections for the Analog Block Module with Current Input and Block-Supplied Loop Power (refer to Table A)

ATIENTION: The 249 ohm input current shunt is rated at 0.25 Watts. Do not exceed this rating.

The block I/O module has an equipment grounding stud on the lower left side of the module. Connect this grounding stud to your equipment ground. Torque the nut to 15 in-lbs maximum when connecting to your equipment ground.

ATTENTION: Do not overtighten the nut on the grounding stud when connecting the wire. Damage to the module could result.

Refer to "Programmable Controller Wiring and Grounding Guidelines" (1770-4.1) for further information.

Table A
Wiring Block Designations

| Connections | 1791-N4C2 |  |  |
| :---: | :---: | :---: | :---: |
|  | Designation | Description | Terminal No. |
| Power Connections | L1 | ac hot | 1 |
|  | N | ac neutral | 3 |
|  | GND | Chassis ground | $2^{1}$ |
| Transducer Power ${ }^{2}$ | +24V | For current input only | 25 |
| Remote I/O Connections | BLU | Blue wire - RIO | 6 |
|  | CLR | Clear wire - RIO | 8 |
|  | SHD | Shield - RIO | 7 |
| I/O Connections |  |  |  |
| Voltage Input | inV0 thru inV3 | Voltage Input 0 through 3 | 9, 13, 17, 21 |
|  | RET in0 thru RET in3 | Input Return 0 through 3 | 10, 14, 18, 22 |
| Current Input | inl0 thru inl3 | Current Input 0 through 3 | 11, 15, 19, 23 |
|  | RET in0 thru RET in3 | Input Return 0 through 3 | 10, 14, 18, 22 |
| Input Ground | GNDin0-GNDin3 | Channels 0-3 ground | 12, 16, 20, $24^{3}$ |
| Output | out 0 - RET out 0 | $\begin{gathered} \text { Output } 0(+) \\ \text { Return output } 0 \text { (-) } \end{gathered}$ | $\begin{gathered} 27 \\ 26^{4} \end{gathered}$ |
|  | out 1 - RET out 1 | $\begin{gathered} \text { Output } 1 \text { (+) } \\ \text { Return output } 1 \text { (-) } \end{gathered}$ | $\begin{gathered} 29 \\ 28^{4} \end{gathered}$ |
|  | Not used | For internal test only; not for customer use. | 4, 5, 30 |
| 1 Connect chassis ground to equipment grounding stud. These are not internally connected. <br> $20-28 \mathrm{~V}$ dc (nominal $24 \mathrm{~V}, 100 \mathrm{~mA}$ ) voltage source for accommodating loop-powered current transducer inputs. <br> Terminals $12,16,20$, and 24 are internally connected together. <br> 4 Terminals 26 and 28 are internally connected together. |  |  |  |

Table B
Acceptable Wiring Cables for Block I/O Connection

| Use | Cable Type |
| :--- | :--- |
| Remote I/O link | Belden 9463 |
| Input and output wiring | Up to 14AWG $\left(2 \mathrm{~mm}^{2}\right)$ stranded with 3/64 inch insulation |

|  |  |  |  |  | Not Valid | 1 | 1 | 1 | 1 | 1 | 1 |

Rack address 77 is an illegal configuration.
PLC-5/11 processors can scan rack 03.
PLC-5/15 and PLC-5/20 processors can scan racks 01-03.
PLC-5/25 and PLC-5/30 processors can scan racks 01-07.
PLC-5/40 and PLC-5/40L processors can scan racks 01-17.
PLC-5/60 and PLC-5/60L processors can scan racks 01-27.
PLC-5/250 processors can scan racks $00-37$.
The SLC 500 controllers communicate with the block I/O using an I/O Scanner module (cat. no. 1747-SN series A). Refer to the user manual for the 1747-SN/A Scanner module for more information.

Note: This block I/O module is not compatible with the 1747-DSN Distributed I/O Scanner module.

## Termination Resistor

A termination resistor must be installed on the last block in a series. Connect the resistor as shown in Figure 8.

Figure 8
Installing the Termination Resistor

ATTENTION: Devices that are operating at 230.4 K baud must have 82 ohm terminators in place for proper operation.

## Indicators

| Indication |  | Description |
| :--- | :--- | :--- |
| Power | OFF |  |
|  | ON |  |\(\left.\quad \begin{array}{l}No power <br>

Power okay\end{array}\right]\)| COMM | OFF | Communication not established |
| :--- | :--- | :--- |
|  | ON |  |
| Communication established |  |  |
| Reset commands being received in Program mode |  |  |

COMM and FAULT will alternately flash when processor restart lockout is selected, a fault has occurred and the processor is communicating with the block.

## 1791-N4C2 Specifications

| Input Specifications |  |
| :---: | :---: |
| Inputs per Block | 4 Selectable |
| Type of Input | $\begin{aligned} & \hline \pm 10 \mathrm{~V}(14 \mathrm{bit}) \\ & \pm 5 \mathrm{~V}(14 \mathrm{bit}) \\ & 0-10 \mathrm{~V}(14 \mathrm{bit}) \\ & 0-5 \mathrm{~V}(14 \mathrm{bit}) \\ & 0-20 \mathrm{~mA}(14 \text { bit }) \\ & \pm 20 \mathrm{~mA}(14 \text { bit }) \end{aligned}$ |
| Update Rate per Channel | 108ms |
| Input Impedance | Voltage: 10 megohm Current: 249 ohm |
| Absolute Accuracy | 0.1\% @ 25 ${ }^{\circ} \mathrm{C}$ |
| Linearity | 0.05\% @ 250 |
| Common Mode Rejection | -75db |
| Normal Mode Rejection | $\begin{aligned} & \hline-18 \mathrm{db} @ 50 \mathrm{~Hz} \\ & -20 \mathrm{db} @ 60 \mathrm{~Hz} \end{aligned}$ |
| Output Specifications |  |
| Outputs per Block | 2 |
| Output Current Range | 0-20mA (13 bits) |
| Output Impedance | Greater than 1 megohm |
| Internal Update Rate per Channel | 10 ms |
| Drive Capability | 20 mA into loads of 1 K ohms or less |
| Short Circuit Protection | Indefinite |
| Absolute Accuracy | 0.1\% @ 25 ${ }^{\circ} \mathrm{C}$ |
| Linearity | 0.05\% @ 25º (over 4-20mA range) |
| Overall Accuracy Drift | $75 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ |
| Specifications continued on next page |  |
